

Test gauge, stainless steel

Safety version, class 0.6, NS 160 [6"]

Models 332.30, 333.30

WIKA data sheet PM 03.05

For further approvals,
see page 6

Applications

- For gaseous and liquid aggressive media that are not highly viscous or crystallising, also in aggressive environments
- Precision measurement in laboratories
- High-accuracy pressure measurement, testing of industrial type pressure gauges
- Increased safety requirements for personal protection
- With liquid-filled case (model 333.30) for applications with high dynamic pressure loads or vibrations

Special features

- Safety version with solid baffle wall (Solidfront) designed in compliance with the requirements of EN 837-1 and ASME B40.100
- Completely from stainless steel
- Knife edge pointer for optimal accuracy of reading
- Wear-resistant precision movement from stainless steel
- Scale ranges from 0 ... 0.6 to 0 ... 1,600 bar [0 ... 10 psi to 0 ... 20,000 psi]

Description

The model 33x.30 high-quality test gauge has been specifically designed for increased safety requirements during high-accuracy pressure measurements and is suited for calibration tasks. With an accuracy class of 0.6, the Bourdon tube pressure gauge is suitable for testing industrial type pressure gauges or for precision measurement in laboratories. Optionally, an accuracy class of 0.25 is possible for pressures ≤ 400 bar [6,000 psi].

The wear-resistant precision movement, the wetted parts and the case are made from high-grade stainless steel. WIKA manufactures and qualifies the pressure gauge in accordance with the standards EN 837-1 and ASME B40.100. This safety version is made up of a non-splintering window, a solid baffle wall between measuring system and dial and

Test gauge, unfilled, model 332.30

a blow-out back. In the event of a failure, the operator is protected at the front side, as media or components can only be ejected via the back of the case. For harsh operating conditions (e.g. vibrations), all instruments are also available with an optional liquid filling.

The optimal readability of the instrument, with a nominal size of 160 mm [6"], is achieved via a knife edge pointer and a dial with fine divisions. In addition, a mirror band scale can be chosen to avoid the parallax error.

On request, a calibration certificate will be provided for this instrument.

Safe storage and transport is ensured by a transport case (accessory).

Specifications

Basic information	
Standard	<ul style="list-style-type: none"> ■ EN 837-1 ■ ASME B40.100 <p>For information on the “Selection, installation, handling and operation of pressure gauges”, see technical information IN 00.05</p>
Further version	<ul style="list-style-type: none"> ■ Oil- and grease-free ■ For oxygen, oil- and grease-free ■ Silicone-free
Nominal size (NS)	Ø 160 mm [6"]
Connection location	Lower mount
Window	Laminated safety glass
Case	
Design	Safety level “S3” per EN 837: With solid baffle wall (Solidfront) and blow-out back
Material	Stainless steel
Ring	<ul style="list-style-type: none"> ■ Bayonet bezel, stainless steel ■ Bayonet bezel, polished stainless steel
Mounting	<ul style="list-style-type: none"> ■ Without ■ Surface mounting lugs on the back, stainless steel ■ Panel mounting flange, stainless steel ■ Panel mounting flange, polished stainless steel <p>For information on “Mounting types, mounting flanges, panel cutouts”, see technical information IN 00.04</p>
