Pressure Transmitter for Precision Measurement Model P-10, standard version Model P-11, flush diaphragm

WIKA Data Sheet PE 81.32

Applications

- Automation engineering
- Test bench construction
- Laboratories
- Maintenance shops

Special Features

- Accuracy < 0.1 % (optionally 0.05 %) of span</p>
- No additional temperature error in the range 0 ... 50 °C
- Digital data processing
- Pressure ranges 0 ... 250 mbar to 0 ... 1000 bar
- Fully welded, stainless steel diaphragml

Fig. left Pressure transmitter P-10 with key pad Fig. right Pressure transmitter P-11 with flying leads

Description

High precision

Pressure transmitters with an accuracy of 0.1% (or 0.05%) are mainly used for testing, calibration and service applications as well as in the process technology and in laboratories.

Digital signal processing

The digital data processing of the precision pressure transmitter P-1X ensures outstanding values regarding linearity and repeatability. System-related temperature errors occurring usually in pressure measuring instruments are compensated by the temperature sensor integrated in the process connection in combination with the digital data processing via microprocessor. This guarantees a total temperature error of less than 0.1% in the range of 0 ... 50 °C.

Easy zero point adjustment

Due to the use of sensor elements with a very high longterm stability a recalibration is not necessary during normal operation. Should a recalibration be necessary for process reasons, the pressure transmitter P-1X can be equipped with a key pad for easy zero point adjustment.

Software EasyCom

Another option is the communication software EasyCom. This software makes an easy calibration of zero and span possible.

Flush version

The model P-11, flush diaphragm series, is especially designed for measuring media that is highly viscous, crystallizing or contains particulates.

In an oxygen version model P-11 is not available. In an oxygen version model P-10 is only available with media temperatures between -20 ... +60 °C / -4 ... +140° F.
{} Items in curved brackets are optional extras for additional price.

Dimensions in mm

Ingress Protection IP per IEC 60 529. The ingress protection classes specified only apply while the pressure transmitter is connected with female connectors that provide the corresponding ingress protection.

For installation and safety instructions see the operating instructions for this product. For tapped holes and welding sockets please see Technical Information IN 00.14 for download at www.wika.de -Service

*) Connectors are not included in delivery. {} Items in curved brackets are optional extras for additional price.
